Overview

The Leave Management module requires business rule validations, workflow changes, and dynamic field behavior.

Requirements

Leave Application Header

- No changes required.

Leave Type Management

- Add search functionality for Leave Type.
- Create separate Leave Type maintenance page.

Leave Period

- Leave Period field must be mandatory.

Leave Days Calculation

System should automatically calculate leave days considering:

- Employee shift schedule.
- Shift Management table.
- Employees working on Sundays.
- Holiday and shift-based calculations.

Half-Day Leave

- Default date should be current system date.

Reason Field Logic**Medical Leave**

- Text box disabled-visible false.
- Dropdown enabled-visible true.

Other Leave Types

- Dropdown disabled-visible false.
- Text box enabled-visible true.

Person In Charge

Provide:

- Person In Charge 1
- Person In Charge 2

Both fields must support search functionality.

Validation Rules

- Person In Charge 1 and Person In Charge 2 cannot be the same employee.
- System should prevent submission when duplicate persons are selected.

Operator Designation Logic

If logged-in employee designation is "Operator":

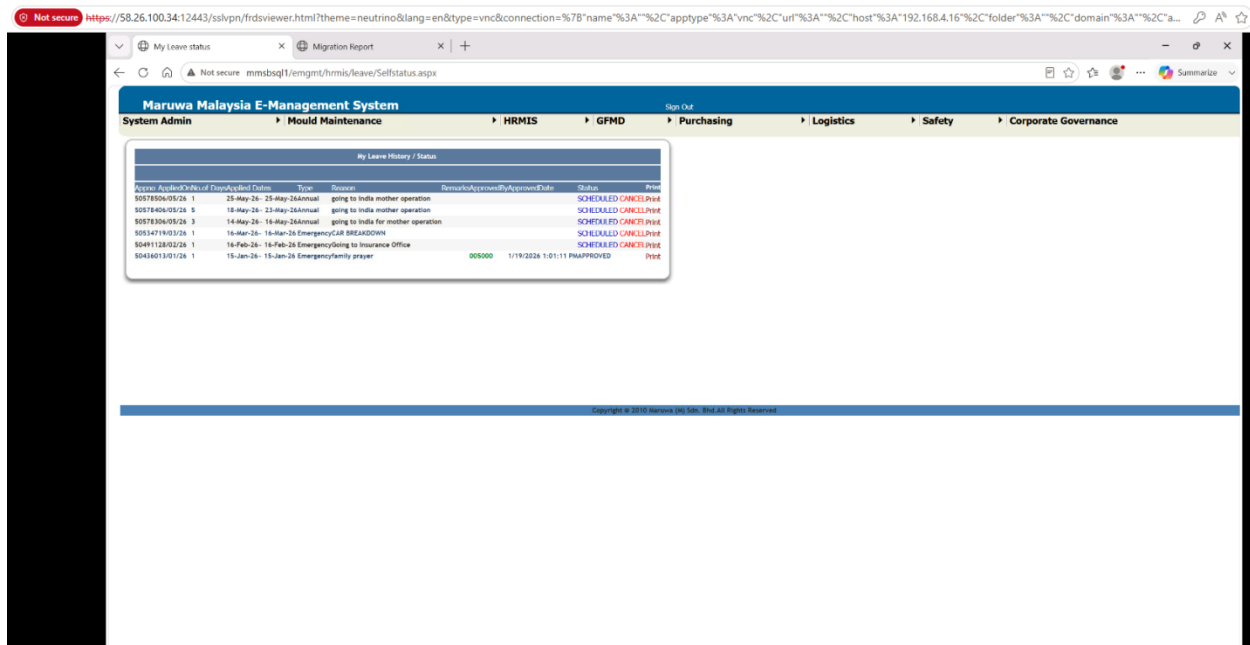

- Hide Person In Charge 1.
- Hide Person In Charge 2.

Workflow Requirement

Upon clicking "Apply Leave":

1. Leave application saved.
2. User redirected to Self Status screen.
3. Leave status displayed immediately.

2.5 Self Status Module

Requirements

Leave Status Display

- Display submitted leave application status.

Scheduled Leave Actions

- Scheduled leave applications should allow cancellation.
- Scheduled status, should redirect to leave application edit functionality.
- Approved or rejected status, should not redirect to leave application edit functionality.

Other Changes

- No additional modifications are required.
- PRINT option Manual Form will discuss later
- If anyone applied leave from portal the PRINT option will be visible false

2.6 Leave Type Master screen

Need to provide new master screen for Leavetype and should fetch all the Leavetype records from DB table
